Two students score 65 in mathematics. One has an execution problem, the other has a concept problem. Your mark sheet cannot tell them apart.

They need opposite interventions. Every Class 10 teacher has both students in the room, and no way to separate them before March.

THE ARITHMETIC NOBODY RUNS

One chapter your class consistently loses marks on. Marks in the paper. .....

Number of students losing them. .....

Multiply. .....

That is one board session. **It is sitting in test papers you have already corrected.**

TWO STUDENTS. SAME MARK. OPPOSITE PROBLEM.

	Arun	Divya
Mathematics	65	65
Concepts	Sound	Gaps in three chapters
Marks lost on	Multi-part questions, presentation	Application
What would help	Timed practice	Rebuild the concept
What they got	**The same revision class**	**The same revision class**

WHERE THE YEAR ACTUALLY GOES

June – March	Board preparation. Nothing else fits.
11 March – 6 April	The public examination.
6 April – 20 May	Six weeks. The student is free, the family is deciding, coaching is recruiting, and the school has no contact at all.
20 May onward	Results. The Class 11 decision is settled in two or three weeks.

The decision that costs you a Class 11 section is made in the weeks your school is closed.

We do not add a single test. We read the ones your school already runs.

The Five Dimensions, read for Class 10

The five dimensions are the same as Class 9. What changes is the emphasis. In Class 9 the question is *who is this student*. In Class 10 it is **given who they are, what is recoverable, and what should happen next.** Each dimension below is read for Class 10 specifically.

01 Academic DNA

Concepts • Weightage • Recoverable marks

Not "weak in maths." Every question in every school test is mapped to a concept and to that concept's weight in the actual board blueprint. What comes back is not a list of weaknesses but a ranked list of marks recoverable per hour of effort — because a student has limited hours and the school has limited revision periods.

WHAT COMES OUT

"Losing marks in three chapters. Together they carry 22 marks in the paper. Two are single-concept fixes and could be closed before the quarterly."

"Cohort: 19 of 38 students are failing the same two questions. One board session, not nineteen conversations."

02 Cognitive DNA

Observation • Patterns • Problem solving

Where do this student's marks actually come from? Two students at 65 look identical on a mark sheet and need opposite support — one loses marks translating what they know onto paper, the other does not have the concept at all. Class 10 is also where the memoriser stops being able to keep up, and where a science group chosen on recall-based marks becomes a Class 11 failure nobody predicted.

WHAT COMES OUT

"Concepts are sound. Marks are lost on multi-part questions and presentation under time. This is an execution problem, not a knowledge problem, and it is the cheapest kind to fix."

03 Learning Behaviour

Consistency • Resilience • Follow-through

A board year is nine months of sustained effort, and Class 9 habits do not automatically survive it. This dimension tracks whether what was flagged actually got done, and whether the next test moved — the difference between an intervention and a recommendation.

WHAT COMES OUT

"Two of three assigned areas were completed. Accuracy in the completed areas improved in the next test. The third was not started and is still carrying 9 marks."

04 Interest & Exposure

Groups • Pathways • Requirements

By Class 10 the stream conversation is no longer hypothetical. Most students can name engineering, medicine and a government job, and stop. This dimension establishes what the student is aiming for, what that group actually requires, and — critically — whether your school offers it. A student who wants Computer Science at a school running only Bio-Maths and Pure Science has had the decision made by a timetable, not by a choice.

WHAT COMES OUT

"Intends Bio-Maths. Cannot describe what the group leads to beyond 'doctor'. Has never met anyone in the field. Three months to change either the aim or the understanding."

05 Self-Awareness & Alignment

Position • Expectation • Reality

Three gaps, and Class 10 is the last year in which they can be reconciled rather than fought over: what the student believes about themselves against what the record says, what the student wants against what the parent expects, and what the family assumes is reachable against what the current trajectory actually supports.

WHAT COMES OUT

"Believes she is weak in mathematics; two years of results say otherwise. Her parent expects medicine. Her current trajectory supports it. Nobody has told either of them."

The year — a spine, not a programme

June – Sept	Baseline. Class 9 record where it exists, first unit tests, concept map per student. Quiet.
October	First flag. Ranked marks at risk, per student and per class. Five months left to act.
December	**The reality checkpoint.** Where each student actually stands, what is reachable by March, and which Class 11 groups that trajectory opens and closes. Two months to change it.
Jan – Feb	Focused revision. Time allocated by marks at risk, not by syllabus order. The school executes; we track what moved.
Mar – Apr	Hands off. Exams.
Late Apr – May	**Continuation programme.** Stream sessions, the group matrix, parents in the room — in the six weeks the school is currently absent.
Post-results	Decision support. The choice is made on the accumulated record, not on one number.

What each stakeholder gains

01 Principal / Management

Board results and retention addressed by the same instrument: which students are carrying recoverable marks, where revision time is being spent badly, and a school-run process in the six weeks when families currently decide alone.

02 Teachers

Which concepts the whole class is failing, so one session serves nineteen students. Which students are execution problems and which are concept problems. No new tests, no plans to write — we read the papers already being set.

03 Students

An honest position in December while there is still time, the specific chapters worth their remaining hours, and a stream conversation that starts before the marks arrive.

04 Parents

The reality in December rather than the shock in May: what is reachable, what it would take, and what the Class 11 choice actually involves — before a coaching institute explains it to them first.

We do not promise higher marks. We cannot control effort, teaching or attendance. We promise that the gap was found, ranked by what it is worth, assigned to someone, and checked afterwards — and that the school is in the room when the family decides.
