Ninety-five out of a hundred students in Tamil Nadu pass Class 12. Your pass percentage no longer says anything about your school.

In 2026, 7,53,694 of 7,91,654 students passed. Private schools cleared at nearly 99%. Whatever separates your school from the one down the road, it is not the pass rate — and it is not on any document you currently produce.

THE ARITHMETIC NOBODY RUNS

Students in last year's Class 12 batch. .....

How many of them you could name the current college of, today. .....

Subtract. .....

That is the number of families who trusted you for two years and then disappeared. **It is also the story you could have told this year's parents.**

The topper can be falling and nobody sees it

Rank hides decline. A student who has lost eleven marks in Physics across two model exams is still ranked first in the class, so nothing is flagged, and the drop only becomes visible in May when it is worth nothing to anyone. Class 12 is the year when a fall costs the most and is noticed the least, because everyone is watching totals rather than trajectories.

The applications open before the results arrive

TNEA registration for 2026 opened on 3 May. Results came on 8 May. Arts and science registration closed on 29 May, the rank list published on 29 June, counselling ran into August. A student who waits for the mark sheet before thinking about any of it has already lost weeks of a two-month process — and nobody in the school is watching that clock.

WHAT WE DO IN CLASS 12, AND WHAT WE DO NOT

We do	Read the tests you already run. Flag anomalies — subject drops, decline hidden behind rank, students whose model-exam trajectory does not match their record. Rank them by marks at risk against the board blueprint.
We do not	Ask for classroom time. Run an aspiration exercise. Add a single test. Introduce anything that competes with board preparation.

Class 12 belongs to the board examination. We work entirely inside the data it already generates.

One period of your Class 12 year: none. We never ask for the classroom.

Class 12 is the narrowest of the four programmes, deliberately. Two things happen: **the board marks are protected, and — once the year is over and the students have left — the school gets something it has never had before.**

PART ONE Board protection

01 Academic DNA

Concepts • Weightage • Recoverable marks

The same engine as Class 10, pointed at a shorter runway. Every question in every model and revision exam mapped to a concept and to that concept's weight in the board paper, ranked by marks recoverable per hour. In Class 12 the ranking matters more than it ever has, because there is less time left and every hour spent on a three-mark chapter is an hour not spent on a fifteen.

WHAT COMES OUT

"Losing marks in two chapters carrying 19 marks between them. Both are single-concept fixes. Eleven weeks remain."

"Cohort: 22 of 41 students are failing the same question type in Chemistry. One session, not twenty-two."

02 Cognitive DNA

Execution • Application • Under time

By Class 12 the concept problem and the execution problem look identical on a mark sheet and remain entirely different repairs. A student who knows the material and loses marks on presentation, multi-part questions or time is the cheapest student in the school to improve — and is currently being sent to the same revision class as a student who does not have the concept at all.

WHAT COMES OUT

"Concepts sound. Marks lost on the final two questions of every paper. This is a timing problem and it is worth roughly 8 marks."

03 Learning Behaviour

Trajectory • Anomaly • Split attention

This is the dimension that matters most in Class 12, and it is about direction rather than position. Who is falling, including the students whose rank conceals it. Who has stopped submitting. Whose external coaching is now consuming the subjects the board will actually test.

WHAT COMES OUT

"Ranked first in class. Physics has fallen eleven marks across two model exams. Nobody has flagged it, because the rank has not changed."

04 & 05 Interest, Exposure and Alignment

Carried, not collected

We do not run these in Class 12. If the student has a Class 11 record it carries forward and informs the destination conversation after the examination. If not, we do not start one now. **Class 12 is not the year to ask a student what they want to become.**

PART TWO The destination record

Collected once, in August and September, from students who have already left. Not counselling. Not applications. A record: where each student in the leaving batch actually went — college, course, town, or the honest answer that they are still deciding.

Why it is worth having

Colleges are judged on where their students go. Schools are judged on a pass percentage that no longer distinguishes anybody. A school that can tell next year's parents where last year's students went has a differentiator that no competitor in the district possesses and no counselling company sells.

It compounds

After three years, the record can answer a question nobody in India can currently answer at school level: what happened to the students who looked like the ones sitting in my classroom now?

What it costs the school

A form, a coordinator, and one follow-up. No classroom time, no teacher time.

The year — where the work sits

June – Dec	Baseline from the Class 11 record where it exists. Concept mapping from unit tests and the quarterly. Quiet.
December	First anomaly report. Who is falling, including behind their rank. Ranked marks at risk. Eleven weeks remain.
Jan – Feb	Revision time allocated by what is recoverable. Model exams re-read. Second anomaly pass.
2 – 26 March	The examination. Nothing from us.
Aug – Sept	The destination record, from the batch that has left.

What each stakeholder gains

01

Principal / Management

The board result protected by finding recoverable marks rather than exhorting effort, and an admissions story for next year that is not a pass percentage. Where your students went, in writing, for the first time.

02

Teachers

Which question types the whole class is failing, so one session serves twenty-two students. Which students are falling behind their own rank. No new tests, no classroom time, nothing to write.

03

Students

In the year they have least time, the specific chapters worth their remaining hours — and no one asking them to complete an exercise about their future in the middle of board preparation.

04

Parents

A clear picture in December, while eleven weeks remain, rather than a surprise in May.

We do not promise marks and we do not fill applications. In Class 12 we do two things: find what is recoverable while there is still time to recover it, and make sure the school knows where its students went.

And, separately, for the students themselves. Yaadhum Foundation maintains a free public guide to what comes after Class 12 in Tamil Nadu — which examinations exist, what the deadlines are, what documents each route requires. In Tamil and English, open to any student, and not part of what the school buys.
