Your unit test in August is meant to tell you what March will look like. If it is not built the way the Board builds, it is telling you about a different examination.

We build CBSE question papers — the full syllabus, or only the chapters your class has actually finished — to the Board's own published design. Every paper carries a marking scheme and a design report that shows the working, question by question. **Session 2026–27. Available now.**

Choose the class, the subject and the chapters. The engine builds the paper.

Two forms. A **full-syllabus paper**, for pre-boards and model examinations. Or a **unit test** on the chapters a class has finished — still worth the full 80 marks, still at board standard. The second is much the harder to build, and it is where school-made papers usually drift away from the Board.

YAADHUM · PAPER BUILDER

CLASS

X | XII

SUBJECT

Mathematics	**041**
Science	086
Social Science	087
English Lang. & Lit.	184
Tamil	006
Hindi Course B	085

PAPER TYPE

Full syllabus | Unit test

CHAPTERS TO BE EXAMINED

- ☐ Real Numbers
- ☐ Polynomials
- ☐ Pair of Linear Equations
- ☐ Quadratic Equations
- ☐ Arithmetic Progressions
- ☐ Triangles
- ☐ Coordinate Geometry
- ☐ Introduction to Trigonometry
- ☐ Circles
- ■ **Surface Areas and Volumes** — 31 marks
- ■ **Statistics** — 31 marks
- ■ **Probability** — 18 marks

Mark distribution derived from CBSE — scaled from the Board's own four-session weighting, then cross-checked against the syllabus.

THE PAPER

Total marks	80
Questions	38
Sections	5
Internal choices	9
Duration	3 hrs

COGNITIVE MIX VS CBSE

Remember 42 · Apply 20 · Analyse 18

WITHIN 1 MARK OF TARGET

GENERATE PAPER + MARKING SCHEME

Illustration of the builder. The chapter list, mark distribution and cognitive mix shown are the real figures from a Class X Mathematics unit test delivered for Session 2026–27.

STEP ONE

Select

Class, subject, paper type and the chapters the class has covered. Nothing else is asked of the teacher.

STEP TWO

Review

The engine proposes the mark split and the cognitive mix, both derived from CBSE. The academic head approves or adjusts.

STEP THREE

Generate

The paper, its marking scheme and its design report are produced together, as one set.

Nothing here asks anything new of a teacher. What the engine removes is the part that is arithmetic and audit: **deriving a defensible mark split, coding every question to a competency band, and writing a marking scheme that will hold across two correctors.**

Four things CBSE fixes, and we match. None of them is a paper setter's choice.

01 · MARK DISTRIBUTION

Where the marks go

Three chapters carry only 17–18 of 80 marks in a board paper. Scaling them to a full 80-mark unit test must preserve the Board's own proportions.

Surface Areas & Vol.	31
Statistics	31
Probability	18

Mathematics 041 · total 80 marks

02 · SECTION ARCHITECTURE

The shape of the paper

Section order, numbering, mark values, word limits and the internal-choice pattern are copied from the 2026 board sets. A student meets the paper they will meet in March.

A — 20 × 1	20
B — 5 × 2	10
C — 6 × 3	18
D — 4 × 5	20
E — 3 case studies	12

03 · COGNITIVE DESIGN

How the marks are earned

CBSE prints, per subject code, the share of marks that must test remembering, applying and higher-order thinking. Every question is coded and the totals audited.

Remember, understand	40 / 40
Apply	24 / 24
Analyse, evaluate, create	16 / 16

Science 086 · CBSE target / this paper · variance 0

04 · SOURCING

Where every mark comes from

Each question is tagged to its origin and the counts published. This is what lets a school answer, question by question, the objection that the paper was made hard on purpose.

Science 086 · NCERT 60 · Board 15 · Constructed 5

Two more, which CBSE does not publish and we hold to anyway: numbers are chosen so the arithmetic resolves cleanly and no calculator is needed, and no question requires a figure to be interpreted, so the paper is usable unmodified for a visually impaired candidate.

THREE DOCUMENTS, PRODUCED TOGETHER AND DELIVERED AS ONE SET

The question paper

Set to the Board's own section order, numbering, mark values, word limits and internal-choice pattern.

The marking scheme

Step-wise marks, accepted alternate forms and working, value points for descriptive answers, and the split inside every multi-part question — so the same answer earns the same mark in two different hands.

The design report

Question by question, against references anyone can open: this one is NCERT Ex. 12.2 Q1, this one is board set 30/7/1 Q16, this one is constructed. Written to be handed to a parent unamended.

Neither of us knew what JEE was until Class 10. One of us found out in time. That was luck.

Project Yaadhum is a field research initiative on how students in small-town Tamil Nadu arrive at their stream and pathway decisions, and the school programme that came out of it. We work on the two halves of one problem: **setting assessments that hold to board standard**, and **reading what those assessments reveal about each student**.

யாதும் ஊரே யாவரும் கேளிர். Every town is our town; everyone our kin. — Kaniyan Pungundranar, Purananuru 192. **Every opportunity belongs to every student.**

The name is taken from that line. It states a claim we build to: that what a child can become should not be decided by which school, which town or which family they were born into. In practice, the standard we set for a school in a district town is the standard the Board itself sets in March — not an approximation of it.

Four years. One record. Why the paper is where it starts.

A school already generates everything it needs to know about its students. Every unit test, every half-yearly, every pre-board carries a detailed record of what each child can and cannot do — and that record is discarded within a week of the paper being returned. A diagnosis is only as good as the instrument that produced it. **That is why we begin at the paper.**

Class
9
Know the student before the decisions arrive

Which students carry foundation gaps into the board year, with eighteen months to close them. Which misconceptions the whole class shares, so one session serves nineteen students.

Class
10
Protect the marks, and be in the room for the stream decision

Which students have a concept problem and which have an execution problem. They are identical on a mark sheet and need opposite help. A December reality check, while two months remain.

Class
11
The year with no external record — and it sets your board result

Who is in the wrong group, in the first month, while it can still be changed. Who is drifting where no exam will catch it. What each student is aiming at, and what it would take.

Class
12
Board protection, and where your students actually went

Who is falling, including students whose class rank hides it. Marks at risk in December, weighted against the actual pattern of recent board papers. A written record of where each leaver went.

What we do, and what we do not

We do	Build CBSE question papers, marking schemes and design reports to the Board's own published design. Read the unit tests, quarterlies and terminals your school already runs, and map them question by question against what the Board actually asks. Write down what should happen next, who owns it, and whether the next test moved.
We do not	Claim access to any paper before the Board releases it, or sell prediction. Ask for teacher time to write reports or plans. Forecast any child's future. Sell coaching, admissions or applications. Share a student's information with anyone outside the school and that student's own family.

THE OTHER HALF · IN BUILD

The Diagnostic Platform

Reads the question-wise marks from a school's own exams and returns a concept-level account of performance — per student, per class, and section to section. It sets no exam of its own, issues no score of its own, and does not rank students against one another. Entering a limited pilot with CBSE schools.

The two are one system. A paper from the engine arrives already tagged — every question carrying its chapter, its concept and its cognitive band — so those marks can be read at concept level the moment they are entered. Either product works on its own.

HOW TO START

- Tell us the class, the subjects, and the chapters to be examined — or ask for a full-syllabus paper.
- We build the paper, the marking scheme and the design report, and deliver them as one set.
- Your academic head reviews the design report before the paper is printed. Any question can be replaced; the audit is re-run and the report reissued.
- The school conducts and corrects the examination exactly as it normally would.
